Communications

To start this new educational institute, White Oak led a creative team working with top notch experts and specialists from the cable telecommunications industry to define a local presence and a distributed, "virtual museum" for the National Cable Television Center and Museum in Denver, on the campus of the University of Denver. Our planning was completed in two phases: The *Concept Development Plan* and the *Strategic Master Plan*. The Center then used these plans to raise funds, build the \$45 million project and launch it in 2002.
